Tactilon Agnet 500

Secure solution for
smarter teamwork

AIRBUS

Tactilon Agnet 500

Tactilon Agnet 500 brings your organization's smartphones into the corporate private digital network. With just a touch of a button you can securely talk, send multimedia messages and exchange live video with your team.

With Tactilon® Agnet 500, smartphone and tablet users become part of the professional world with the reliability, security and capabilities that users expect including:

- Push to talk
- End-to-end secure
- Video calls and live streaming
- Emergency calls
- Lifeguard
- Real-time location tracking

Just like advanced professional radios, Tactilon Agnet 500 keeps system updated on users' locations. In addition, field users can see their colleagues and point of interests on a map in their smartphones. Existing processes can be improved by

introducing:

- Rich media messaging (e.g. pictures)
- Positioning (e.g. group location)
- Dispatching and tactical group administration
- Video sources (e.g. body camera)

Tactilon Agnet 500 runs natively on standard or ruggedized devices and on web browsers. It offers a simple, intuitive user interface that Airbus has developed using its long experience of public safety ergonomics.

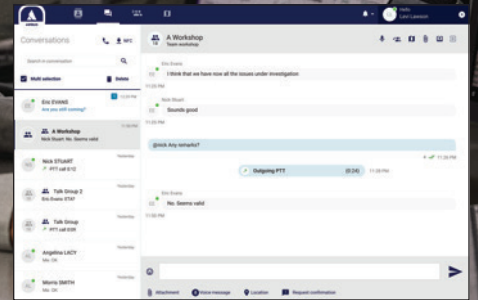

Flexibility provides efficiency

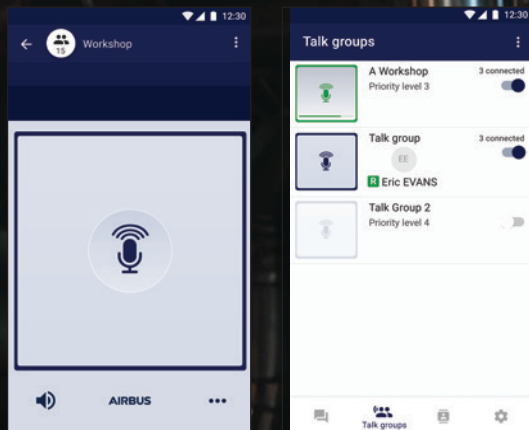

Corporate users can use Tactilon Agnet 500 to access advanced applications, helping improve effectiveness and

using resources more efficiently. Field workers become knowledge workers, with the solution enabling enterprise field operations to collaborate and coordinate efficiently and improve safety.

Tactilon Agnet 500 can also be used by team supervisors as a light dispatch solution to easily coordinate large field teams needing real-time communications.

Wherever you are and whatever your collaboration demands, Tactilon Agnet 500 brings you and your team together. Whether you need to share pictures of a damaged rail or get support with live video while repairing a switchboard, Tactilon Agnet 500 makes all users a full part of the team.

Keep all employees safe

Sometimes things go wrong and every second counts. If you press the emergency key, your team, supervisors and control room can be alerted without a delay. In an isolated environment your safety is ensured with the lifeguard functionality: the application automatically sends an alert in case you fall down.

Thanks to positioning and status the control room is always aware where the team members are and what tasks they are performing. With Tactilon Agnet 500 the total emergency response time can significantly be reduced.

Compatibility across the board

Tactilon Agnet 500 supports 3GPP standards, which Airbus contributes to in the area of Mission Critical Services. Airbus also conducts comprehensive tests of various devices to define a useful ecosystem for end users and operators and assure the right level of service and interoperability.

The use of Google and Apple maps conveniently avoids the need for dedicated maps, while SMS and email authentication help to ensure fast set up.

A complete solution as a service

Tactilon Agnet 500 is a cloud-based service with two subscription plans (see the table on the following page). It is ideal for professionals seeking a modern, easy-to-use, flexible and scalable group collaboration solution to help them improve daily operations.

The cloud-based service enables rapid set up and low costs without the need to focus on hosting or maintenance activities. You can choose where to host your mission-critical services - either on your own servers or those of a trusted party. Service availability is high, while you gain full flexibility in terms of the number of subscribers and add-on features.

Security patches are updated immediately and new capabilities can be introduced without delay.

Tactilon Agnet 500 supports hybrid network solutions which enable organizations to migrate smoothly from narrowband systems (DMR, P25, Analog, TETRA and Tetrapol) without disruptive change programs. Not only does Airbus provide unrivalled expertise in evolving mission-critical collaboration to hybrid environments, but our SmarTWISP ecosystem allows to organizations to extend their capabilities and adopt new use cases through seamlessly integrated applications and accessories..

Tactilon Agnet 500

It's easy to get started with Tactilon Agnet 500

Tactilon Agnet 500 is easy to bring into operation, requiring only a laptop or PC for provisioning and dispatching, wireless broadband services, and Android or iOS smart devices.

Why not request a free 30-day trial to see the power of Tactilon Agnet 500 for yourself? Simply visit securelandcommunications.com to request your trial or a full commercial service.

You will receive an activation link by email and guidelines for first login. You can then create an organization with groups and users in the Web Company admin tool. Users will receive an email with guidelines to install the Agnet app and activate accounts in smartphone and web browsers.

Then your users are ready to start communicating with each other in the field and enjoy all the benefits of advanced professional communications.

Ongoing support is easy too, with Airbus providing a helpdesk, user guides and on-site or remote professional support services.

Extend your system to do even more

Tactilon Agnet 500 can be further extended to meet even the most advanced needs through a range of add-on services for leveraging existing professional radio networks and LTE prioritization as well as supporting special devices and their management systems.
