

# TC USB-CHARGER

When you need to use backup power.

How do you charge your Airbus radio when the electric power is down?

## High quality USB-charger

Backup power is the needed to ensure your power supply, when the electric grid is down. The Tetra net sites have backup-power supplies and will work even if there is no electricity.

But how do you power up your Tetra terminal if there is a power failiure?

We at TC Connect has produced our own USB charger to ensure that your communication will work even if you have no electricity in your power sockets. To ensure that this charger holds the same quality as our other products we have had it tested accordingly to the CE standard. When you buy a new charger, we include an USB-C adapter. (The adapter can be bought seperately, if you want to complete your already bought charger.)

The charger can be connected to powerbanks, your laptop and the USB-port in your car.  
The USB-charger works with all these Airbus Tetra terminals: TH1n, THR9, THR9i, THR880i and TH9.

Our USB-charger is a certified accessory by AIRBUS and is available in their accessory catalogue.

Product number: ACC1901

Product number: ACC1901/1
